

## JavaScript Array Methods - Practice Questions

1. Sum all even numbers in the array: [1, 2, 3, 4, 5, 6, 7, 8, 9]
2. Double all odd numbers in an array: [1, 2, 3, 4, 5]
3. Remove duplicates from the array: [1, 1, 2, 3, 4, 4, 5]
4. Find the first number that is divisible by 5: [4, 12, 10, 8, 15]
5. Sort an array in descending order: [5, 4, 3, 2, 1]
6. Flatten the nested array: [[1, 2], [3, 4], [5, 6]]
7. Count how many times the number 2 appears in an array: [1, 2, 2, 3, 4, 2]
8. Convert the array of numbers into a string with a hyphen separator: [1, 2, 3, 4, 5]
9. Check if all elements in the array are positive: [-1, 2, 3, 4]
10. Get the last element of an array using .at(): [10, 20, 30, 40]
